# “ASTRA” 4” ALARM VALVE MODEL “E”

## Groove/Groove

### DESCRIPTION AND OPERATION

The “Astra” 4” Alarm Valve model “E” must be installed vertically in the main supply to a wet type sprinkler system. Where water pressure fluctuates, such as encountered with city water supplies, variable pressure trim including an Excess Pressure Pump or a retard chamber must be used. For installations where water pressure does not fluctuate, such as tank supplies, constant pressure trim is used without the need of an Excess Pressure Pump or a retard chamber.

Care must be exercised when installing check valves in the trim to be certain that they are located with the arrow on the body pointing in the proper direction. The arrow on the body of the 1/2” check valve **must** point toward the alarm valve body.
